

VACCUME PUMP

BE 146

Based on the provided text, it appears to be a garbled or OCR-scanned excerpt from a product description for a rotary vane high vacuum pump (also known as an oil-sealed rotary vane pump). These are common laboratory or industrial pumps used for creating high vacuums in applications like soil testing, filtration, or distillation. I've cleaned up the grammar, removed repetitions, and restructured it for clarity while preserving the original meaning.
